## Craftsman Kits and castings in HO and O Scale

This kit will take you back to the days when these sheds were common on the sides of existing buildings, before the days of building permits and inspectors. We have tried to capture a small side building that will butt up to any existing building. If that existing building had an interior you could knock out the wall and have a classic shop extension.

The kit is all resin and consists of 6 parts and one of our new junk piles to put outside the shed. The assembly is straight forward and requires some light sanding. The walls interlock and make sure you square them. The door can be positioned open or close. I recommend that you paint the castings before you assemble the kit.

I use a very simple method to paint my castings. Since the kit is supposed to be wood I spray the casting with Model Masters Dark Tan FS 30219 to get that overall wood color. Then I paint the detail using acrylic paint the cheap ones for less than a buck a bottle. Then I take out my alcohol and Indian ink mixture and brush it on to fill all the cracks and give some depth. Then last is to get some dirt chalk and dust the casting this gives the effect shown in the picture.

Then it is personal taste add vines to the outside put glass in the windows or board them up you know what to do. I hope you will enjoy this kit as much as I enjoy creating it. I have more of these coming so stay tuned. What is great about this kit is it look great outside then you can see your friends jaws drop when you open the roof and let them look inside. I know a few of these will be added to my buildings on my new layout.

Thanks for purchasing our products and please let me know if you have any comments or concerns about the product. Also submit some pictures of your finished model and we will add it to our web page gallery.
